

Q.7 Search In Mountain Array

Friday, January 24, 2025 8:09 PM

[1,2,3,4,5,3,1]

Ans :-

- ① Find peak element \Rightarrow 4th index
- ② Binary Search in asc arr \Rightarrow (0, 4)
- ③ If not found, BS desc arr \Rightarrow (4, 6)

arr = ^{0 1 2 3 4 5 6}
[1, 2, 3, 4, 5, 3, 1]
_{5 e}

① Find Peak index

while (s < e)

s = 0, 4
e = 6, 5, 4

$s + (e - s) / 2$

$0 + (6 - 0) / 2$ $(4 + (6 - 4) / 2)$ $(4 + (5 - 4) / 2)$

mid = 3, 5, 4

arr[3] = 4, arr[5] = 3

if arr[3] > arr[5+1]

$5 > 3$ // False

if arr[5] > arr[5+1]

$3 > 1$ // True

e = mid

else

s = m + 1

s = 4

if arr[4] > arr[4+1]

~~---~~
s = 4

if arr[4] > arr[4+1]
5 > 3
e = mid

return start[4]
